Summary

Driven Artificial Intelligence and Machine Learning student with a strong foundation in Data Structures, Algorithms, and Object-Oriented Programming. Experienced in building full-stack web applications and AI-driven tools using Python, Java, and React. Seeking to leverage software development and machine learning skills in a challenging entry-level engineering role.

Technical Skills

Programming Languages: Python, Java, C, SQL, HTML, CSS, JavaScript, LUA
Frameworks & Libraries: React, Node.js, Next.js
Databases: MySQL, MongoDB
Core Competencies: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Machine Learning
Tools & Platforms: Git/GitHub, VS Code, Salesforce, Blender

Experience

Salesforce Developer – Agentblazer Champion Program
May, 2025 – July, 2025

- Developed custom Salesforce applications and automated CRM workflows using **Apex, Flows, and Lightning Components** to execute real-world business integrations

Application Development Intern – Infosys SpringBoard Virtual Internship 6.0
February, 2026 – April, 2026

- Engineered **PaperIQ, an AI-powered analyzer** utilizing intelligent text extraction to automate research summarization, keyword identification, and methodology analysis.

Education

B.Tech in Computer Science and Engineering – Artificial Intelligence & Machine Learning | CGPA: 9.11/10

- Malla Reddy College of Engineering & Technology, Hyderabad, Telangana|2023-2027

Intermediate (MPC)|78.1%

- Sri Chaitanya Jumior College, Kurnool, Andhra Pradesh|2020-2022

Secondary School Certificate (SSC)|GPA: 9.8/10

- St. Ann's Grammar School, Hyderabad, Telangana|2017-2020

Projects

Web Based OS Algorithm Animator

- **Technologies**: HTML, CSS, JavaScript, Python (Flask)
- Designed and developed a web-based tool to visualize operating system algorithms with clear and interactive animations.

AI Powered Drug Similarity Predictor

- **Technologies:** Python, Machine Learning (K-Nearest Neighbors), Plotly, Matplotlib, RDKit
- Developed an AI-powered CLI tool using KNN algorithms and RDKit to compare molecular structures, generate 2D visualizations, and recommend alternative drugs.

SwiftVisa-AI enabled visa eligibility screening agent

- **Technologies:** Python, Streamlit, FAISS, Groq API(LlaMA 3.1)
- Developed an AI-powered visa screening agent to automate eligibility assessments, verify documents, detect missing requirements, and generate personalized recommendations.

Certifications

- Machine Learning with ChatGPT & Google Data Analytics: Foundations - **Coursera**
- Problem Solving using Python – **CodeTantra**
- Responsive Web Design – **freeCodeCamp**
- Cambridge English Empower C1 – **Cambridge given by MRCET**
- Learn Java – CodeChef & Learn C in – **CodeChef**
